How to create a Admin User:

Login as root in aws management console

enter in “IAM” in search text box

Then go to user and click on create user

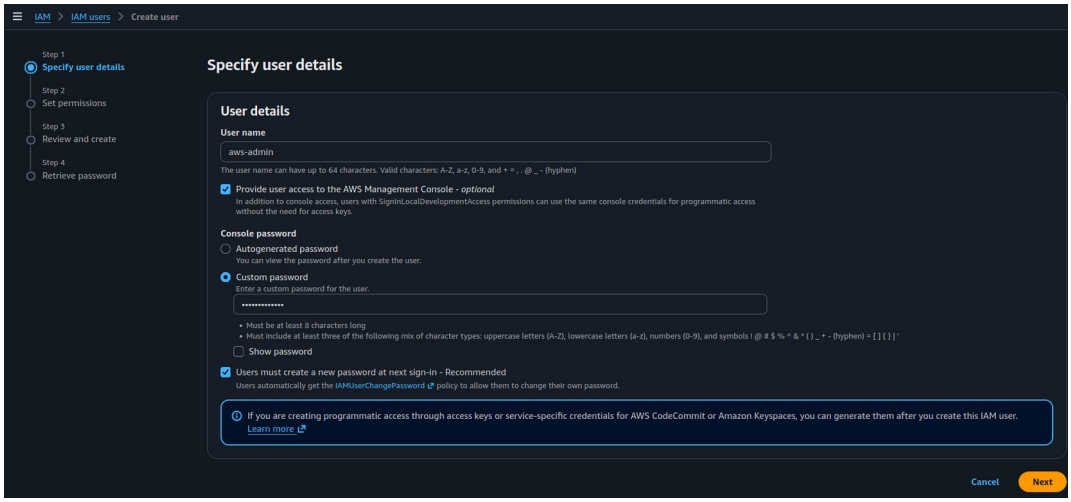

Enter user name

select “Provide user access to the AWS Management Console – optional

set a password. (I prefer custom password, but you can select whatever is easier for you)

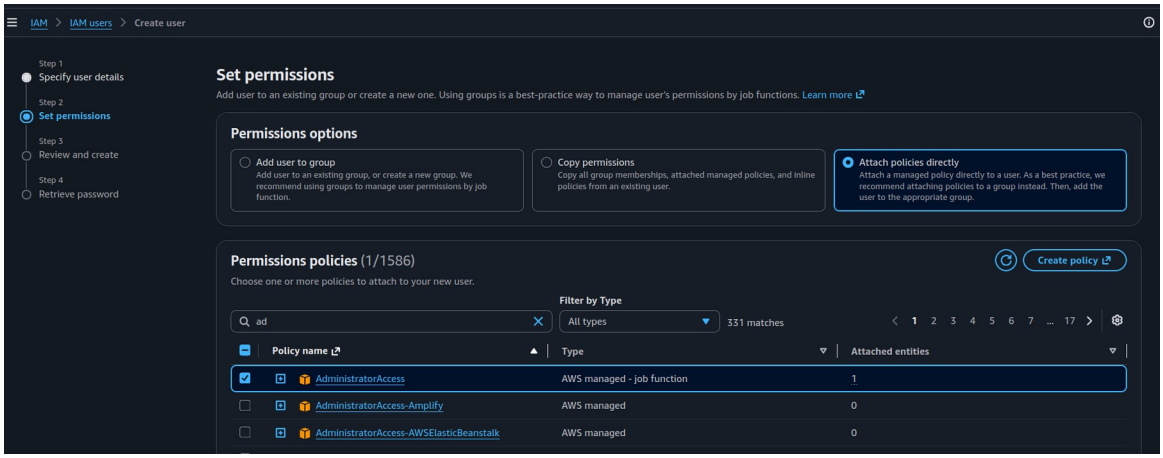

you can also force user to change his password on his first login.

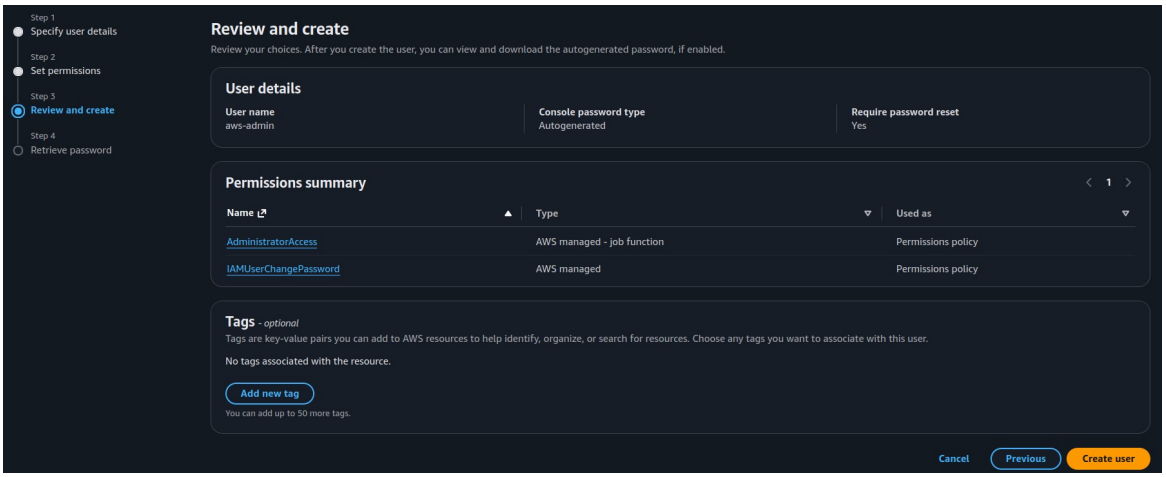

Click next

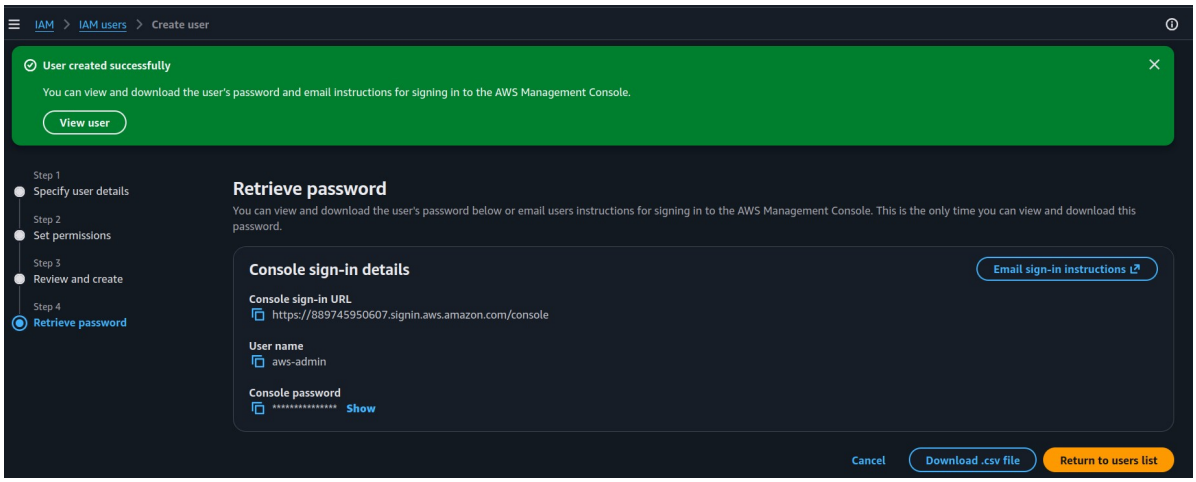

On Set permissions page, select “Attach policies directly

In Permissions policies search box, enter administrator or select “AdministratorAccess” Permission

click next

User is created
